

# Zachary Yedidia

zyedidia@stanford.edu

[zyedidia.github.io](https://zyedidia.github.io), [github.com/zyedidia](https://github.com/zyedidia)

Areas of interest: operating systems, security, compilers, computer architecture.

## EDUCATION

---

### Stanford University

Stanford, CA

*Ph.D. candidate in Computer Science*

*Sep. 2021 – 2027 (expected)*

*Advisors: Prof. David Mazières and Prof. Dawson Engler*

### Harvard University

Cambridge, MA

*S.M. in Computer Science*

*Sep. 2020 – May 2021*

### Harvard College

Cambridge, MA

*A.B. Magna cum laude with highest honors in Computer Science*

*Aug. 2017 – May 2021*

## PUBLICATIONS

---

### Automated Formal Verification of a Software Fault Isolation System (short paper)

Matthew Sotoudeh and Zachary Yedidia

FMCAD 2025

### Deterministic Client: Enforcing Determinism on Untrusted Machine Code

Zachary Yedidia, Geoffrey Ramseyer, David Mazières

OSDI 2025

### Segue & ColorGuard: Optimizing SFI Performance and Scalability on Modern Architectures

Shravan Narayan, Tal Garfinkel, Evan Johnson, Zachary Yedidia, Yingchen Wang, Andrew Brown, Anjo Vahldiek-Oberwagner, Michael LeMay, Wenyong Huang, Xin Wang, Mingqiu Sun, Dean Tullsen, Deian Stefan ASPLOS 2025

### DeCl: Deterministic and Metered Native Sandboxes

Zachary Yedidia, Geoffrey Ramseyer, David Mazières

SIB 2024 (workshop)

### Lightweight Fault Isolation: Practical, Efficient, and Secure Software Sandboxing

Zachary Yedidia

ASPLOS 2024

### Fast Incremental PEG Parsing

Zachary Yedidia and Stephen Chong

SLE 2021

### Precision Batching: Bitserial Decomposition for Efficient Neural Network Inference on GPUs

Maximilian Lam, Zachary Yedidia, Colby Banbury, Vijay Janapa Reddi

PACT 2021

## OPEN SOURCE PROJECTS

---

### Lightweight Fault Isolation (LFI)

Paper, GitHub Project

A state-of-the-art software-based sandboxing system that enforces memory isolation on machine code within a single address space. LFI can be used for in-process library sandboxing, low-latency serverless functions, application sandboxing, smart contracts, and more. This is my primary current project.

### Micro Text Editor

Website, GitHub Project

I created and launched a text editor called Micro in April 2016. Since then, Micro has gained over 25,000 stars on GitHub, more than 750,000 downloads, and 100+ contributors. It aims to be a successor to Nano as a simple-to-use terminal-based text editor. Micro is available in many package managers such as Homebrew, Apt, Snap, AUR, Chocolatey and more.

<b>GPeg</b>	Paper, Thesis, Slides, GitHub Project
Library for PEG parsing, as part of my senior thesis research with Professor Stephen Chong. Additionally includes a library for syntax highlighting: <a href="https://github.com/zyedidia/flare">github.com/zyedidia/flare</a> .	
<b>Literate Programming Tool</b>	Website, GitHub Project
A tool for compiling Literate programs written in any programming language.	
<b>Eget</b>	GitHub Project
A tool for automatically installing pre-built binaries distributed in GitHub releases.	
<b>Go Generic Data Structures</b>	Github Project
A library of generic data structures for Go.	
<b>Knit</b>	GitHub Project
A flexible build tool that combines Lua with Make's declarative rules language.	
<hr/>	
<b>WRITING</b>	
<b>Incremental PEG Parsing</b>	
Senior thesis (2021), advised by Prof. Stephen Chong.	
<b>SystemVerilog Guide</b>	
Course materials for CS 141 (Spring 2020) at Harvard	
<hr/>	
<b>AWARDS</b>	
NSF Graduate Research Fellowship (2022-2024).	
<hr/>	
<b>SERVICE</b>	
External reviewer for ACM TOPLAS.	
<hr/>	
<b>EXPERIENCE</b>	
<b>Google</b>	Mountain View, CA
<i>Student Researcher</i>	<i>Summer 2025 - Present</i>
<b>SiFive</b>	San Mateo, CA
<i>Chisel Team Intern</i>	<i>Summer 2022</i>
<b>Zero ASIC</b>	Virtual
<i>Intern</i>	<i>Summer 2021</i>
<b>Harvard University</b>	Cambridge, MA
<i>HCRP Research Fellow (Advisor: Prof. Stratos Idreos)</i>	<i>Summer 2020</i>
<b>Princeton University</b>	Princeton, NJ
<i>Research Assistant (Advisor: Prof. Naveen Verma)</i>	<i>Summer 2019</i>
<b>Harvard University</b>	Cambridge, MA
<i>PRISE Research Fellow (Advisor: Prof. Eddie Kohler)</i>	<i>Summer 2018</i>
<hr/>	
<b>TEACHING</b>	
<b>Distributed Systems (CS244b)</b>	Stanford
<i>Course Assistant for Prof. David Mazières</i>	<i>Spring 2024</i>
<b>Advanced Topics in Operating Systems (CS240)</b>	Stanford
<i>Course Assistant for Profs David Mazières and Dawson Engler</i>	<i>Spring 2023</i>
<b>Using Bits to Control Atoms (CS49n)</b>	Stanford
<i>Course Assistant for Prof. Dawson Engler</i>	<i>Autumn 2021</i>

<b>Systems Programming and Machine Organization (CS61)</b>	Harvard
<i>Teaching Fellow for Profs Eddie Kohler and Minlan Yu</i>	<i>Fall 2020</i>
<b>Computing Hardware (CS141)</b>	Harvard
<i>Teaching Fellow for Profs David Brooks and Vijay Reddi</i>	<i>Spring 2019, Spring 2020</i>
<b>Compilers (CS153)</b>	Harvard
<i>Teaching Fellow for Prof. Stephen Chong</i>	<i>Fall 2019</i>

## TALKS

---

<b>Lightweight Fault Isolation: LLVM Support for Efficient Native Code Sandboxing</b>	
<i>LLVM Developers' Meeting</i>	<i>October 2025</i>
<b>Deterministic Client: Enforcing Determinism on Untrusted Machine Code</b>	
<i>OSDI</i>	<i>July 2025</i>
<b>Deterministic Client: Enforcing Determinism on Untrusted Machine Code</b>	
<i>MIT DCI</i>	<i>May 2025</i>
<b>Securing Native Libraries on Android with LFI</b>	
<i>Qualcomm Product Security Summit</i>	<i>May 2025</i>
<b>Deterministic Client: Enforcing Determinism on Untrusted Machine Code</b>	
<i>Stanford Security Workshop</i>	<i>April 2025</i>
<b>Lightweight Fault Isolation</b>	
<i>Software Compartmentalization Community Tech Talk</i>	<i>April 2025</i>
<b>Deterministic Client: Enforcing Determinism on Untrusted Machine Code</b>	
<i>Stanford Security Lunch</i>	<i>March 2025</i>
<b>Sandboxing Native Libraries on Android with Lightweight Fault Isolation (LFI)</b>	
<i>Google</i>	<i>February 2025</i>
<b>DeCl: Deterministic and Metered Native Sandboxes</b>	
<i>SIB</i>	<i>September 2024</i>
<b>DeCl: Deterministic and Metered Native Sandboxes</b>	
<i>Stanford Software Lunch</i>	<i>July 2024</i>
<b>Lightweight Fault Isolation: Practical, Efficient, and Secure Software Sandboxing</b>	
<i>ASPLOS</i>	<i>April 2024</i>
<b>Lightweight Fault Isolation: Practical, Efficient, and Secure Software Sandboxing</b>	
<i>Stanford Security Workshop</i>	<i>April 2024</i>
<b>Lightweight Fault Isolation: Practical, Efficient, and Secure Software Sandboxing</b>	
<i>Stanford Security Lunch</i>	<i>November 2023</i>
<b>Classic Software Fault Isolation and WebAssembly</b>	
<i>WebAssembly Research Day</i>	<i>October 2023</i>
<b>Multiplix: using D for kernel development</b>	
<i>DConf</i>	<i>September 2023</i>
<b>Fast Incremental PEG Parsing</b>	
<i>SLE</i>	<i>November 2021</i>
<b>Fast Incremental PEG Parsing</b>	
<i>Stanford Software Lunch</i>	<i>November 2021</i>
